Reporting & Analysis

With over 180 reports to choose from, the ACE System provides operators with detailed information and statistics across the gaming floor. Allowing operators to retrieve reports in real-time across a number of devices, including tablets and smartphones, the ACE System supports easy on-the-go access to key data whilst maintaining our high standards in security.

Reporting Categories & Grouping

The ACE System reporting suite allows operators to choose from a range of categories, including analysis, cash desk, soft count, machine, metres, jackpots, tables, transactions and VIP's/members. To compliment such a comprehensive selection, ACE enables users to group reports and run them as a batch, saving time and providing operators with a convenient tool to link immediately to their favourite day-to-day reports.

Remote Reporting

Remote reporting allows authorised users secure, off-site access to the ACE reporting suite.

Custom Reports

Our fully customisable solution extends to our reporting tool, allowing operators to create and customise their own reports using Crystal XI and import into the ACE System reports module. As with all ACE reports, these can be exported in a number of formats, including Microsoft Excel, Word, PDF and BI Tools.

Mobile Manager

Mobile Manager is our simple and easy to use on-the-go app. Providing instant, secure access to essential data and statistics, this is the ultimate tool for any casino manager.
